

Add a Display language

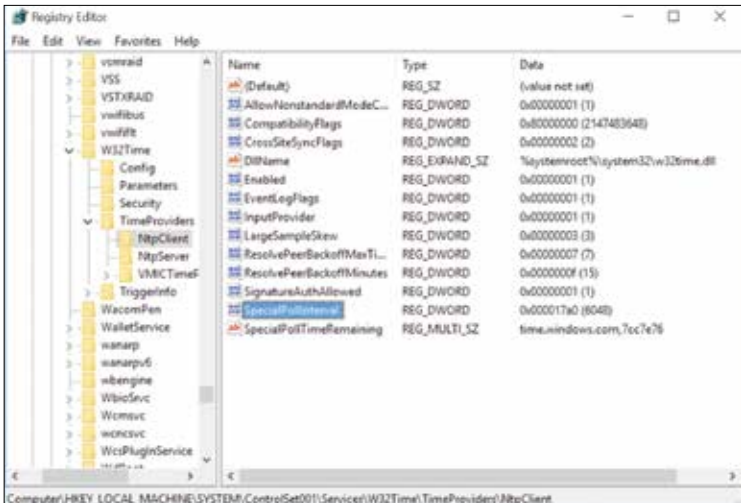

In an extremely multi-lingual developing nation like ours, having a native language display on the operating system can ease the transition to technology and open new doors for many people who would otherwise be daunted by it. To add a new display language, go to Settings > Time & language > Region & language > Add a language. Select the language you want and it will be displayed under 'Languages'. Click on the newly installed language, then Options and finally click on the Download button to download the complete language pack.

Customize your folder

Change the Time Sync Interval

By default Windows 10 synchronizes its time with the time servers at a frequency of once a week. If you want to change said frequency for any reason,

Reset the time update interval from the Registry
