

even trusted Usability enough to scrap multi-million dollar projects based on this metric (most notably, cosmetics giant Avon, who ditched four years and \$125,000,000 based on a Usability study).

As time passed, and progress became exponential, these designers and product developers being human, naturally got bored and wanted to take things to the next level. This time they asked, “Does the user like using our product to achieve his goal? What can we do to make it a more pleasant experience?”

Thus was born User Experience Design. Which brings us to the meat of the matter..

UX Design- The Meat Of The Matter

User eXperience (UX) encompasses all that a user experiences when interacting with your product, service or brand. This includes everything, whether they like the background color of your website, the speed with which it loads, the speed with which they receive their delivery, how the delivery guy talks to them, even what the user feels when looking at a billboard bearing your logo! The experience itself, however, is a stream of consciousness in the brain of the user, and is always a subjective perception of your product, be it an application, website or anything! Thus everything that contributes to this experience is your design, whether it be purposefully planned or not. Even though users don’t actively remember, or even think of, the whole experience of interacting with your design, the experience does leave a mark. Unless they

The basic form of user centered design
