

9. Continuous attention to technical excellence and good design
10. Simplicity—the art of maximizing the amount of work not done—is essential
11. Self-organizing teams
12. Regular adaptation to changing circumstance

The Agile Methodology works better than Waterfall methods at ensuring customer satisfaction because usually, when it comes to software, the initially specified requirements are mostly off the mark. Though better than its predecessor, Agile methods are still not as close to perfect as they would like to be for their lack of user research and user testing.

This leads us to the latest, greatest methodology in recent years - a mix of the best of both worlds (Agile and UX).

The Basic Process : In the Real World

From interviews with various real-life UX Designers, we can see the following structure and differences from the ideal process:

Analysis

The early stages of the project always involve collecting more information about the problem. The actual activities performed by designers in this stage are meeting with the client and identifying the product's requirements, benchmarking concepts and trend analysis. They seldom perform user interviews, but writing User Stories is one of the commonly accepted attachments to the Product Requirement document. User Stories are sometimes created based on Personas which are almost never backed up with data. Field Studies and Task Analysis are hardly used by any of the designers
