

Why do we need Mockups?

Mockups don't have the resistance of low fidelity deliverables, which do not allow user interaction and are much quicker to create than prototypes. Further, due to their visual nature they're effective for gathering feedback about how users interact with the interface.

A mockup of a UI

Basic Differences Between the Three Techniques			
	Fidelity	Use	General Traits
WIRE-FRAME	Low	Documentation and quick communication	Grayscale models
PROTO-TYPE	Middle to high	User-interaction testing mostly	May be interactive or static
MOCKUPS	Middle to high	Gathering feedback	Interactive visualisation
