

create fully functional mockups in Justinmind. While it comes preloaded with a basic widget library, you can download more. It supports web pages, Android apps, iOS apps as well as Google Glass apps. For enterprise users, there are certain in-app purchases that allow them to collaborate via their servers and synchronise their UIs. If you're a team working on the same project, then just share the document via the desktop application itself.

Cost: Free

5. Axure: One of the most intensive visual design tools for UX designing is 'Axure'. If you want to create a complete and functional high fidelity mockup of a web page or app, use Axure. We tried Axure RP Pro version 7.0.0.3184, which has a 30-day free trial. It has the basic preloaded web widgets library. You can download more iOS and Android widgets and even templates. Its interface takes time to get used to, but it lets you use

Axure runtime interface

fully functional dynamic panels, unlike Justinmind. You can add cases like hide, show, swap and move content in the dynamic panel contents to make it more interactive. It also lets you create team projects. It lets you convert the prototype into Word document or CSV files or html document.

Cost: \$289 per license (Standard), \$589 per license (Pro)
