

6. Pencil Projects: If you own a somewhat old version of Windows, Android or iOS or are simply a retro fan, then ‘Pencil Projects’ is your one-stop solution. The standard widget pack of Pencil has XP widgets, Android ICS widgets and a “sketchy” widget to make the wireframe a bit more funky. However, Pencil can only generate a wireframe or a low fidelity static prototype unlike Axure or Justinmind.

Cost: Free

Pencil Projects runtime interface

7. Adobe Fireworks: If you’re a fan of Adobe, then here’s another Adobe product for you. It creates low fidelity prototypes and static mockups of the interface. If you’re an avid Photoshop user, then Fireworks is your go to UX designing tool as the latter smoothly integrates Photoshop, Illustrator and Dreamweaver.

Cost: 22,113 for the complete Creative Suite
