

elements like the plague. Proper UX design is meant to channel and focus the user's attention, as opposed to a design with multiple focal points that sends attention helter-skelter and confuses the user.

3. Standardise across platforms. These days, in order to reach as many users as possible, almost everything is cross-platform. This means visitors will access your service over many different devices and browsers. A good UX design needs to ensure a similar experience across all platforms.

4. Focus on the main point. Directing focus is a well known principle even in magic (misdirection), and not for naught! Most users will only skim over and not read every last word in every last corner. The main content should be the central focal point, such that it draws attention at a glance. It's all about trapping 'em eyeballs!

5. Create easily navigable Information Architecture. Users come looking for content. Then, they get drawn in by related content, which amplifies usage. Interest is generated by the content, however, continued usage critically depends on the ease with which the various content can be accessed. Make your content structures easy to navigate around. It's the hallmark of good Information Architecture.
