

UX Design learning redefined

‘Lean UX Training’ and ‘Digital/Agile Project Management Training’.

Tools for better UX design

For a website to attract and retain visitors, its user interface should be designed in a way that ensures smooth and intuitive navigation. To ensure optimum user experience across all platforms, including desktop and mobile, you’ll need a couple of tools. Let’s explore a few such important tools that will come in handy in the UX design process.

Moqups.com is used to create wireframes, mockups and prototypes. Further, you’ll be able to customise each component – be it color, text size or icon.

Wireframe.cc enables you to easily create wireframes and share them with a unique URL to other team members from within the tool.

UXPin.com enables you to view the UI as it would look in mobile browsers by simply resizing the browser’s screen. The tool helps you to create interactive prototypes and wireframes in an intuitive and elegant manner.

Filesq.com helps you to create not only interactive prototypes, but also share them with other team members. Designers will be able to retrieve feedback directly in real time.
