

versions, etc. In short, user experience teams will achieve sales targets of digital products.

2. Clicks and interactions will be rewritten

While the focus so far has been on reducing the number of clicks, the future holds the promise of no clicks whatsoever. Interactions will reach a pinnacle with no clicks required to reach the destination. Interactions will be hand-gestured or voice-activated and experience will revolve around soft and polite voice versus gruffy voice.

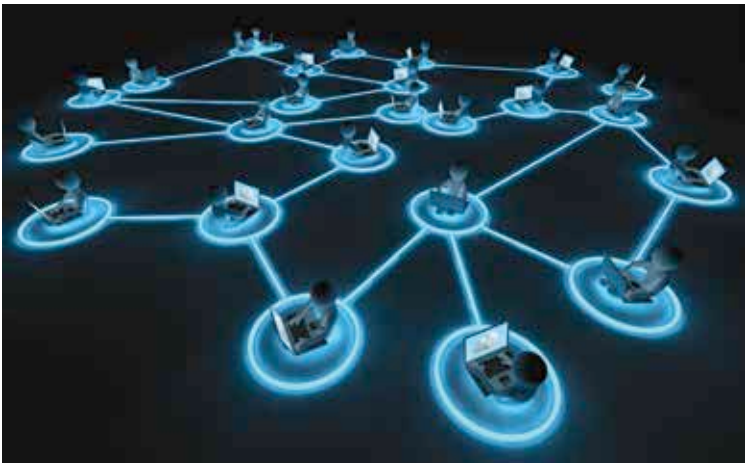

3. Conversational interfaces

UX in future would be conversational. Users would interact with their gadgets by conversing with them. Say you're at the airport, eagerly waiting for your husband, who's returning from a long foreign trip. The gadget will constantly update you about his flight status, his seat number and exactly how far your husband is from the exit of the airport.

We'd talk to our car systems. Instead of turning volumes up and and down, we'd just say if we're feeling too cold/hot and the AC will automatically adjust to a comfortable temperature.

4. Crowd-sourced design

Crowd-sourced design or participatory design would take inputs from a

Crowd-sourced design
