

huge electronic businesses competing on a level with newborn, crowd-funded startups and a noticeably quick growth in its market compared to previous years. All kinds of businesses, military forces and especially medical professionals have been always been using this technology for years, but the private consumer market place has only just started to feature items such as smart glasses, smartwatches, hearables, fitness and health trackers and even smart jewellery. The global market for wearables is expected to at least reach to a value of 19 billion U.S. dollars in 2018, to easily cross more than ten times of its value five years prior.

As of 2015, the most successful wearables on the market are, and are likely to continue to be, those worn around the wrist, such as health and fitness trackers and of course, smartwatches, which are surprisingly expected to account for 9 in 10 of these gadgets bought globally. The among the most important producers of smart watches are Samsung, Pebble, Fitbit, Apple, Sony, Lenovo and LG. Although, the most successful fitness trackers so far were produced by the likes of Nike, Fitbit and Jawbone.

As the wearable business is set to increase from \$20 billion in 2015 to almost \$70 billion in 2025, the dominant sector will be likely to remain healthcare by which we mean a merge of medical, fitness and wellness. It is seen to have the most number of big names like Apple, Accenture, Adidas, Fujitsu, Nike, Philips, Reebok, Samsung, SAP and Roche spearheading the most promising new developments.

Wrist Wearables are most successful so far
