

Will Head Mounted Displays really take off?

access and the ability to capture images. Although it was discontinued this year but it deserves credit for bringing wearables into the general public attention as opposed to just in specialized tech conferences.

In the meantime, Microsoft's HoloLens is perhaps one of the most interesting AR device. It has generated a lot of hype for Microsoft and company CEO Satya Nadella has strongly backed the company's investment in the technology. In May, Nadella told The New York Times that HoloLens was one of the reasons Microsoft bought Mojang, the parent company of the hit virtual world-building game Minecraft, for \$2.5 billion.

Microsoft seems to be looking to fund projects that use HoloLens as a business analytics tool, making large amounts of data easier to analyze and use. It's also interested in research teams that can create useful applications for medical training, design education, interactive journalism, psychology applications, and workplace communication.

Smart Clothing

Smart clothing is a broad term used for garments with electronic in a way that would make them more interesting or fashionable. They would also have additional functionality although the garment would appear essentially the same.
