

Now, that's tapping to a winning rhythm!

The wearer of the device would have wires running down the length of his body, concealed under his clothes, leading down to the leg where they find their housing in the shoes where they are attached to switches. An earpiece was also part of the contraption which would convey messages as musical tones- one each for the octants of the roulette wheel. Simple tapping of the foot were used to give “inputs” to the computer. The duo, even though they covertly tested the device in Las Vegas casinos, never used it for the purpose of gambling.

The Pulsar calculator watch in 1975

These days, the Pulsar calculator watch has a firm place in the list of vintage devices. But when it came out in 1975, the device was considered as an ingenious piece of technology. The first ever wristwatch calculator, the watch was introduced just before Christmas of that year. The first 100 pieces were “Limited edi-

One watch to calculate them all!
