

tion” and was made in 18 kt gold and the price was a whopping \$3,950. However, people really did like the idea as all of them sold out and the company followed it by introducing the stainless steel version for \$550.

With red LED display of up to 6 digits, and the ability to perform calculations up to 12 digits, this one created quite a stir when it was introduced for the first time in America.

Move to the music while on the move

Sony Walkman in 1979

Not even the Apple’s iconic iPod has been able to bloat the memory of the Sony Walkman. At least, not among those who have had a great time grooving to music during the 80s and 90s, thanks to this extremely portable music device. The fact that a highly vibrant youth culture- features of which included sexual exploration and individu-

alism, existed in America when it was introduced helped make Sony’s device all the rage. Following their success with audio cassette players, Sony made the product innovation which enabled users to carry their music anywhere they went. As for the quality of the cassette tape frequently getting tangled, that’s another story altogether

Seiko UC 2000 Wrist PC in 1981

A wristy, geeky affair

One of the earliest attempts at creating a wearable computer, Seiko’s Wrist PC looks like small fish judging by present day standards. 2K was all the volume of data that you can feed to the ‘PC’ which would perform functions like telling the time or calculating sums for you. Ambitious as the invention was, it didn’t go down well with the audience- probably because
