

was testimony to how much technology has literally become a part of people's lives by the turn of the millenium.

Bluetooth headset in 2002

We all know how it is- people talking as if mumbling to themselves, all thanks to the 'hands-free ' luxury that the Bluetooth headset affords them. And it all began in year 2002 when Nokia devised the first ever Bluetooth headset- the Nokia HDW-1. Initially conceived as a concept program, the product was later accepted as a product program. Unfortunately though, the device- which was based on Nokia's proprietary chipset, LPRF was scrapped before going for mass production. But that doesn't take the sheen away from it since it served as the basis for more advanced products in the category.

Blue is the new cool

Nike + in 2006

What would happen when two of the world's biggest companies came together to create a product? If the companies in question are Nike and Apple, then the answer is a cutting-edge wearable device that takes your athletic performance to whole new heights- the Nike Plus. Introduced in 2006, the product has already gone through a few significant evolutionary steps and is a favourite among runners.

Just wear it

A transmitter that can be embedded in a shoe transmits information to the activity tracker- a Sportband or an iPod/iPhone to which the transmitter is linked. The runner could get the exact stats regarding the distance covered and the pace etc. Apart from athletes, health-conscious individuals also find this a useful device for obvious
