

reason. What with a host of life-style induced ailments like obesity and high levels of cholesterol making it inevitable for millions around the world to exercise on a regular basis, Nike's introduction turned out to be timely as well as innovative.

Fitbit classic in 2008

The company, Fitbit Inc. which is headquartered in San Francisco took the wearables route to challenge Nike by introducing the Fitbit classic. It was the first in the line of products that measure such statistics as the number of steps that one take while walking, the quality of sleep and also the number of steps climbed aside from other personal metrics. Having a more expansive list of features than the Nike Plus, added with the fact that it has appeal to a broader audience than the athletically-conscious, Fitbit is rather popular and could have significant influence on the wearables to come.

The bits and bytes of fitness

Google Glass in 2013

Everyone saw the lines between science fiction and reality blur significantly when Google came out with their unique product, Glass. The idea behind the product that comes with a head mounted display was to create a ubiquitous computer. Part high-end toy, part utility, the Google Glass is already put to good use in fields as disparate as healthcare and journalism. Undoubtedly a significant leap in the evolution of wearables, the product-
