

platform as Pixelsense and tied up with Samsung for manufacturing the revised surface table, now called Samsung SUR40.

Sensor Network User Interface (SNUI)

Easily the most intriguing of interfaces on this list, SNUI deals with creating a human-computer interface by using networked objects that are designed specifically to interact with each other. Not unlike TUIs, an SNUI requires physical, tangible objects that are programmed to interact with each other, preferably when they are nearby. These objects are all roughly the same size and plenty in number.
