

of this data is often suspect considering the number of imposters and fraudsters, there is no denying the results. The only drawback to this system is that it cannot accurately predict consumer habits.

In this respect, wearable technology lends great promise to the future of personalised advertising and marketing. Wearable technology devices can potentially be used hundreds of times over the course of a day, more people will engage with them than their traditional gadgets, meaning that every minute is trackable and buying habits and personal preferences can be easier tracked. While this sort of intrusive marketing is bound to receive criticism, the average consumer may forever be unaware of it and
