

LET'S TALK DEVICES

By showcasing the multitude of devices out there, we'll help you select the right wearable for you

Judging by the name itself, wearable technology clearly refers to gadgets that you wear. However, there is a critical distinction that separates what qualifies as “wearable tech” and standard electronic peripherals such as headphones or digital watches. Wearable technology helps devices connect to a smart network to help play a number of functions that would otherwise require multiple device. and they do this using sensors and network connectivity. You can use them to track your fitness, stay organized, and stay updated even when your away from a phone or computer.

Wearables are wrist worn, clipped to your body, hung around the neck, and even implanted under your skin. Some manufacturers are attempting to integrate wearable technology with clothing and jewelery. So what are the main kinds of wearables available in the market right now?

Smartwatches

In terms of functionality, few wearables can compete with the versatility of smartwatches. All smartwatches come with a display, which can be
