

at the watch or by double tapping the screen. The new model also features an upgraded processor, but sticks with the 512MB of RAM and 4GB of internal storage found in the original.

Both models are available in two size variants: a men's version at 46mm and one for women at 42 mm. Motorola has settled on three color variants, including black, silver and gold, and the women's variant is also available in Rose Gold. Both watches feature a crisp IPS LCD display, with a pixel density of 205 to 233 ppi depending on your variant. They support wireless charging and are IP67 certified, which means they are dust proof and water resistant up to 1 meter in in depth for 30 minutes. Finally, the battery life is on par with other smartwatches in the market, with the original 360 providing up to 1 day's worth of battery life on a single charge and the 360 2 giving up to 2 days. Both also support convenient wireless charging.

LG G Watch series

LG holds the distinction of being the first manufacturer to manufacture an Android-Wear compliant smartwatch. To this end the LG G Watch and its round variant, the G Watch R, are pioneering devices and extremely solid in terms of both build and performance. The G Watch features a more function-oriented design, evident by its obvious gadget-like square design, which is in stark contrast to the more stylish round design of the G Watch R. It hence comes as no surprise that the G Watch has a larger display 1.65-inch display while the G Watch R packs a compact and more watch-like 1.3-inch display. However, the G Watch R does have a more advance OLED display, which is arguably more immersive and less battery-consuming when compared with the LCD display of the G Watch.

Besides these, the two watches are almost identical. They both feature a 1.2GHz processor with 512MB of RAM and 4GB of internal storage space. In terms of software, both are loaded with Android Wear OS and can also be paired with iOS devices, albeit with limited functionality. They connect to your smartphone via Bluetooth 4.0 and are charged via the proprietary connector dock. The only other difference is in the battery: the G Watch has a 400 mAh unit, which was marginally improved upon in the G Watch R, which features a 410 mAh unit. Unfortunately, neither magnetic wireless charging or any form of standalone network connectivity such as WiFi or 3G.

In 2015, LG released the G Watch Urbane and Urbane LTE, which hoped to address some shortcomings of last year's G Watches. It features
