

(left to right) The Fitbit Flex, Charge, and Charge HR

that light up depending on how close you are to completing your daily fitness goal. The Flex has a battery life of up to five days, and can be fully charged in up to 2 hours.

The Fitbit Charge features a more detailed OLED display that shows a standard digital clock and also supports caller ID display, provided your band is paired with your smartphone. It also automatically detects when you fall asleep, and comes with the same sleep tracking features as the Flex. The Charge also comes in a more expensive HR model, which supports real-time heart rate monitoring. This version is obviously a bit bulkier owing to the inclusion of the heart rate sensor.
