

an inactivity alert LED, which would light up after an hour of inactivity, reminding you to take a spare minutes for a quick walk or exercise. This feature has been augmented in the Vivofit 2 by adding an beeping sound to the alert. It also comes with an activity stop watch timer, allowing you to keep a check on your workout times. Despite all of these feature additions, Garmin still promises an incredible 1 year of battery use.

Jawbone Up

Jawbone looks to set itself apart from its competitors by focusing on providing a clean design aesthetic. The Jawbone Up features “medical grade” rubber casing which encloses a host of high-end sensors for fit-

Jawbone stands out with its minimalistic design

ness tracking. It is completely devoid clips and clasps and its flexible form factor ensures it can fit a wide range of wrist sizes. Sleek in design, its display-free design does not attract too much attention and is extremely lightweight. For interaction, it features a single button on the tip of one end, which if long-pressed switches between day and night modes. On the other end of the band is the 3.5mm jack that the Jawbone Up uses for communicating with your phone.

In terms of functionality, the Jawbone Up is a basic pedometer with the sleep tracking functionality built-in using patented algorithms. It can analyse how well you sleep by sensing movements, and lets you know when you have had a poor night's sleep. Jawbone has developed an easy
