

The default reaction of a first-time Oculus Rift user

movement tracking, while greatly reducing the effect of motion sickness by increasing the frame rate. Playing FPS games on this headset is sure to be a blast. Oculus is still tinkering with the headset, so consumers can expect more improvements before the final version is released.

HTC Vive

Inspired to a great extent by the Oculus Rift, HTC's Vive hopes to achieve success by implementing HTC years of experience in developing products that excel in design while taking cues from Valve, a highly respected brand in the gaming community and whom they are collaborating with to design the headset.
