

WHAT DOES THE FUTURE HOLD?

When we look at the future, we see the human-machine divide disappearing.

Will wearables be the catalyst in the dawn of that future?

Technology is an amazing thing to have. We interact with numerous tech-enabled devices on a daily basis, but how many of them are smart enough to recognise your habits, usage patterns and unique identifying features? Imagine a world where you could touch your door and it recognises your touch to let you in.

Wearable tech has been the answer to some of our fantasies involving tech interactivity for decades now since its advent. It has become a part of everyday life due to the way humans interact with wearables, thus reducing the gap between them and this tech.

What's the future like?

Before discussing what wearables of the future will be like, let's just first
