

Human Universal Load Carrier' or 'HULC' for military

- ◆ **Smart Bands:** This is an exclusive category due to the wide array of functionality provided by these bands. Nowadays, smartbands are much more than just fitness trackers. They have yet to get into the sphere of full-fledged personal fitness assistance. But going by the current trend, it can be deduced that they're getting there sooner than we imagined.
- ◆ **Medical Tech:** Various vital signs and fitness measuring parameters such as level of oxygen, glucose, cholesterol, etc can be easily calculated by a single device, which could be in a smartband form factor or an entirely different form factor. But the true potential of the device will be revealed in its ability to let doctors tracking your data through the gadget contact you to visit them because there's something wrong with your body.
- ◆ **Veillance Monitors:** 'Veillance' is a concept that includes surveillance and sousveillance, both of which cover a similar set of tasks, but while
