help soldiers in combat carry loads of up to 200 pounds at a top speed of 10 miles per hour for extended periods of time. After being under development at Berkeley Robotics and Human Engineering Laboratory since 2000, the system was announced publicly at the 'AUSA Winter Symposium' on February 26, 2009 when an exclusive licensing agreement was reached with Lockheed Martin.

Are we entering the era of cyborgism?

To answer this question, let's define a cyborg first: A cyborg (short for "cybernetic organism") is a being with both, organic and bio-mechatronic parts. The term "cyborg" isn't synonymous with "bionic", "biorobot" or "android" and applies to an organism that has restored function or enhanced abilities
