

is out of power. So John just plugs his communicator to his suit and continues moving down the stairs, because his suit can well produce current. By the time he reaches his car, his communicator has enough power to contact his wife.

- ◆ On reaching home, John realises he's exhausted, so he puts on his Muse band to relax him. After a few minutes of meditation, John feels good enough and goes for dinner.
- ◆ After dinner, his activity monitoring band tells him that he has consumed more calories than usual, so he has to cut back in his next meal.
- ◆ John heads to his bed for a nice night's sleep, when he's interrupted by his activity monitoring band notifying him of his daughter's crying. So he heads downstairs to put her back to sleep.

Kurtzweil's trajectory for exponential growth of technology

- ◆ After putting his daughter to sleep John finally gets a good night's sleep
- ◆ The next day, the cycle continues.

As you can see, wearables can make life so much easier at crucial moments when any average person would have difficulty dealing with the situation.

Potential of wearables

Ray Kurzweil proposed “The Law of Accelerating Returns”, according to which the rate of change in a wide variety of evolutionary systems (including,
