

the center of the activity, reshaping an entire enterprise and its capabilities system around the customer or user experience.

3. Instill Trust: As trust is a key concern with consumers in the wearables space, enterprises will need to be consistently transparent with what they do with data and how they use it. Trust needs to be established early on.

4. Recognise that the Wearable Category Will Continue to Evolve: As with any digital strategy, adopting wearable technology requires taking the long term view into account.

Conclusion

According to “The Law of Singularity”, we may be at the pinnacle of the mass adoption of a new lifestyle, which so happens to be wearables in this generation. While it’s premature to predict specific features or form factors that will prevail in the future, wearable tech presents a fascinating field to study. Never before has computing been small enough to be worn relatively comfortably around the clock on the body, presenting opportunities for breakthrough medical advancements (and unfortunately marketing nuisances).
