

- ♦ Educational computing, since it is a 35\$ computer
- ♦ Media oriented projects like Home media server or retro games handheld player.

If you are looking to make a call blocker, a personal VPN go for the Pi. Although latest developments have seen the ability to interface in Raspberry Pi, Arduino is still a better no-nonsense alternative for that.

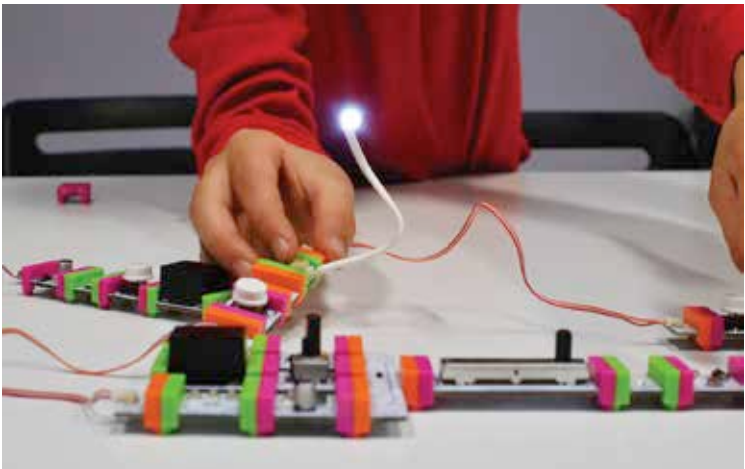

Beaglebone

Advantages:

- ♦ Fully operational out of the box as it comes with flash memory and has the OS preinstalled.
- ♦ Can be set up and used without a display.
- ♦ Supports Android.
- ♦ Overall operational cost lower.
- ♦ Can interface with lot of devices easily due to large number of general purpose I/O pins

Disadvantages

- ♦ Doesn't have many USB ports or video encoding built in.
- ♦ Community fervor not as strong as the Pi and the Arduino.
- ♦ Tutorials and project ideas comparatively harder to come by
- ♦ Not originally intended for educational purposes, so more complicated to work with

The kid friendly littleBits kits join modules using magnets
