

But back to Bob. This robot stands at a height of 10 inches and can walk, race and dance. It is for these many talents that 'he' is treated like a child who is called on to entertain guests. But unlike most children are made to believe, Bob isn't one of a kind. In fact, the plans to make the humanoid are available in painstaking detail on Instructables for free. This means there have been multiple Bobs before and after this Mumbai version was born. Some of them and their makers even show up in the comments section.

Ankit Daftery, founder of Daf Labs provides basic kits to makers, for example, TinyBoard is an Arduino compatible board developed to have micro-controller board with a small footprint and low cost for use in making everyday objects interactive

The maker movement is an umbrella term for tinkerers, inventors, innovators, designers, artistes, DIY enthusiasts and hobbyists who like to work with their hands. The culture is characterised by learning by doing, iterating using digital manufacturing tools and sharing knowledge with a community of peers.

Maker Mela 2015, organised in Mumbai's Somaiya College of Engineering by their makerspace Riidl saw a footfall of 50,000 visitors and 100 makers
