

A game changer in Virtual reality

of VR blew up. The gaming and movie industry began unleashing visions what the future holds and overnight VR was hailed as the next big thing!

A peek into VRs history

While some believed that 3D stereoscopes gave birth to virtual reality, there were others who said that technology was its birth mother. To tech lovers, VR seemed to be pioneered in the late fifties and early sixties. So who do you think these pioneers were?

Morton Heilig

In 1960, when Morton Heilig- a documentary inventor and film maker patented Telesphere Mask, which was the most influential invention in the history of VR. This mask was a TV set that played 3D images with basic stereo sounds. Taking this experience to next level, he created something that was
