

as exceptional and exciting as a theatrical movie. In 1962, he gave birth to a simulator called Sensorama, which could actually play a film. It was of course not a three hour film, but something that could blow your mind.

“You are seated on top of a motorcycle, travelling through the Brooklyn streets and wind whipping through your locks with a faint smell of food hitting your nose. There are engines rumbling in the background and you run out of tokens.”

You’ve just experienced the effect of Sensorama. This 3D film created an immersive environment that stimulated the senses to create a whole new experience. That’s exactly how Virtual Reality felt like in 1962.

Ivan Sutherland

A visionary of Virtual Reality, Ivan Sutherland introduced the Ultimate Display in 1965. This display allowed the audience to step into a virtual world resembling the real world. This gave rise to countless developments in the world of virtual reality.
