

HTC Vive- A VR headset

gamers step inside the virtual world, thus delivering an ultimate sense of presence. Improved visual and virtual experience, accuracy and presence are few of its extraordinary inclusions.

Another player in the market- HTC, is also on the verge of entering innovative gaming world. With HTC Vive's release still awaited, most tech savvy people are still eyeing on its specifications. All the players- Oculus, Samsung, HTC and Sony are looking to take over the world by VR storm. Choosing the best headset amongst all the available ones will be a sheer difficult task for us.

It's going to rain VR headsets in 2016. With so much of buzz about Rift's release, one can only think about diving into this realistic artificial world of Virtual Reality. And, if you can't shell out money in buying these expensive headsets, there are DIY options available as well.

You can be a hermit and play around with your own version of Google VR headset. Google Cardboard allows the user to immerse into the virtual world and spend affordably at the same time. You can either buy Google cardboard at a convenient rate or fold it up on your own using some basic stuff from your household. You can make a VR headset just like that!

Create the headset, download the connecting app, scan barcode and use it- that's all you need to do for diving into an unforgettable VR experience using your smartphone.
