

HOW VR WORKS + MAKE YOUR OWN

What does it take to make your own VR device?

Back in the first chapter, we explored the basic idea of Virtual reality - the origins, the concepts and mankind's few early attempts. Also, by now, you must be aware that the torchbearer of VR right now, Oculus, started off as a DIY project in someone's garage. The only thing left for you to know before you get your hands dirty, is how Virtual Reality technology actually works to make it happen. And for that, one of the first questions we need to ask ourselves is, what is real?

The “Real” Problem

Our definition of reality relies heavily upon our sensory perceptions - what we see, hear, smell, touch, taste becomes our reality. Do you think your body is clever enough to distinguish the real from the unreal? Then think about this, when you spin for a while and then stop, why does your mind perceive you to be still spinning just because of a liquid spinning inside your head? This is one of many conundrums whose answer lies in our perception of the reality around us, be it real, or perhaps virtual.
