

has gone ahead and unveiled his brand new VR broadcast solution which could potentially replace the good old 3D television. It has redefined the way entertainment is mediated in the modern era and opened up a Pandora's Box in terms of the potential of VR.

♦ **Virtual Amusement Parks**

The entertainment industry is welcoming VR with open arms, if the new Galactica roller coaster introduced by the Alton Towers in UK is anything to go by. This may have something to do with the vapid sameness of theme parks around the globe and the fact that none of them are offering the visitor anything new. Since they couldn't build a 'Jurassic Park', they decided to go with the next best thing in market: VR and invent a ride that promises to make you see stars – quite literally – with their space content.

The Quantum Leap VR camera for 360 degree content distribution.

♦ **Adult video industry**

After TV, the adult video industry is sure to take a liking to VR given how they have never shied away from experimenting with new avenues, to make their content more fun and exciting. In fact it may be a shocker but many technological developments have been “conceived” just to “satisfy” this industry. Much like how a lot of tech developed for the Space Race soon found its way into regular spheres of life, the Adult industry has been “seminal” in much the same way. The ‘immersive reality’ factor, however, is sure to take the err..viewing experience up by several notches for the viewer (caution oldies!).

Content creation and development

The content creation industry too, has gotten onto the VR bandwagon. Interestingly, even before the entertainment industry started grappling with the idea, content creation solutions were available worldwide – it's just that people, at the time, weren't aware of the potential of the devices they held. Take for instance:
