

a shunt from the right ventricle to her only pulmonary artery – a task near impossible to do without visualising the whole surgery. But thanks to a Google cardboard (an idea suggested by one of his colleagues), he did the impossible and used human tissue to regrow the organs besides building the shunt in place.

◆ Don't just sit and game

Gaming in VR can be very intuitive, but as they say, there are two sides to every coin. Virtuix has attempted to rectify this miniscule flaw with its new Omni. “Gaming to be healthy”, is what Virtuix calls it. They have an

Omni gaming platform replete with tracking software and motion sensors which track your gestures as well as movements and respond accordingly inside the gameplay. In other words, they want you to move to play and win.

Another similarly great product is Infinateck – a treadmill
