

Students trying out Google Cardboard for their field trip.

them to. It is a combination of Google Cardboard and StreetView. Exhibit A: Quest Elementary, Florida took their fourth graders to a field trip to ‘Mexico’ without ever setting foot outside Florida.

♦ Be an astronaut from your bedroom

Many companies are coming up with virtual imaging solutions, but none of them indicated how content would be distributed. Besides, of course, SpaceVR, who came up with a virtual video recorder. Once installed on the International Space Station, the content recorded would be distributed to every individual on earth to empower them to explore space beyond what is visible to the naked eye. In short, you can now be an astronaut from the comforts of your own bedroom.

Simulation and Training Industry

Experienced personnel always have an edge over newbies. But how do armies and astronauts or even everyday factory employees gain experience without ever having faced a disaster? There are no wars to fight and we haven’t yet created any anti-gravity devices which can create humans or factory accidents to save yourself from. This is where simulated training comes into the picture.
