

Be that as it may be, Virtual Reality (VR) Technology aims to replicate reality- notwithstanding the fact that philosophers and scientists are yet to come to a consensus regarding what exactly is meant by 'reality.' Well, in the case of VR, the reality that's aimed to mimic is the one which we derive from our senses. The very idea throws up a list of limitless possibilities, many of which have been speculated in science fiction. From walking on the moon while you are lying down on the bed in the room of your very terrestrial home to dancing with your favourite movie star or training to fly an aircraft without stepping inside one, many are the magic possible with VR. And here are some of the most exciting VR startups who with vision and drive are heralding in a future that's mind bending in the truest sense of the phrase.

## 1. Magic Leap

It's not just because Google made a hefty investment in the company that the US based Magic Leap deserves your attention. For the company has for its project one that is considered as a leap forward from the way current VR headsets function. The idea is to rev up the headsets with light field solution.

Light fields can replicate perfectly what your eyes can see- meaning, the bridge between what's real and what's not will be non-existent. Magic Leap is already seen by some as a potential rival to Oculus- one of the most popular companies in the VR segment.

That's not to say that Magic Leap doesn't contend with challenges. Perhaps the most important challenge for the company will be in coming up
