

and desktops, the camera effectively captures interiors and helps create walkthroughs. In other words, it's taking the idea of a realty walkthrough and transporting it into the virtual reality domain.

Based in Silicon Valley, Matterport's core area of business at the moment is obviously real estate. But, it'll be interesting to see what other things the technology could be used for- a walk through the streets of Paris while you are in Hyderabad? Why not?

4. Razer

Razer didn't start out as a VR company. But that doesn't mean that what they are doing now is anything less than exciting. The company's core business has been creating gaming hardware-including laptops and controllers

aside from accessories like keyboards and mice. However, last year Razer entered the VR space with a project that could be seen as a sign of the sector coming of age.

Their project is called Open Source Virtual Reality(OSVR) and yes, as the name suggests the idea is to create a single open standard for virtual reality as a whole. Bolstering the project is backing from huge companies including Ubisoft and Unity. As a sign of bigger things to come, the California based company has already released a modular 'Hacket Dev Kit' of the OSVR hardware.

5. Jaunt

Now, here's one company that's ambitious. Even though founded as recently as 2013, the Palo Alto based Jaunt nonetheless is already one of the biggest
