

Ring and what is termed as a “casual motion capture” system. The exact nature of these devices still remain sketchy in public view. The nature of the VR industry which is still in its early stages has necessitated a high level of secrecy.

But the company, based in Mountain View, N.California has already attracted funding from major business houses and also going for Nod Labs is the presence of some of the finest minds in the technology field working for them-many of whom having an accomplished track record with organizations such as Apple, Google and NASA.

9. Altspace VR

Another Silicon Valley-based entity, Altspace is a shared social VR service. What with social media being THE place to be on the internet right now, Altspace seems to become something that will have plenty of young people
