

in a frenzy- much to the chagrin of the ‘elders’ of course. Another cool thing about Altspace is that you can use it with or without headsets. Meaning, it’s not just the ‘cool’ kids who have a Rift development kit who can use it.

Also, by using a powerful browser which can be used within Altspace, you can indulge in some fun things like watching a Youtube video with your friends. Tell us you are not excited about this and we’ll show you a liar.

10. Virtuix

Locomotion while using VR, while sounds exciting is hard to pull off.

Virtuix offers a good solution to that end with Omni. Simply put, Omni is an omnidirectional treadmill on which one can walk to get a better illusion of a VR environ-

ment. The device works with a pair of shoes that come with it. The shoes notch into the slots that are on the otherwise ultra-smooth surface of the bowl. And as the user moves on the pad, the movement of their feet is mapped onto the virtual space. It seems like, with its unique take on locomotion, the Texas based company is certainly going places in the VR space!

11. NextVR

NextVR, based in Orange County, California has some good-no, great news to share with sports fans across the world. Before we get into the details, let it be reminded that savvy as the latest plasma screen might be, watching sports on TV is still a far cry from how it’s experienced live in a stadium. Not that what NextVR has for you would bridge the divide completely but there’s no doubt that it’s a big leap ahead in how audiences are going to consume sporting events.

Their project is a one-of-a-kind wraparound video capture and live streaming technology which gives you a closer look at a game like never before. And when we say closer, we mean closer. The company gave the world(or rather potential investors) a taste of their technology when they broadcast live the U.S Open last year. The company has some 20 patents
