

THE FUTURE: WILL VIRTUAL BE THE ONLY REAL?

A future where VR is deeply integrated
in our lives doesn't seem too far

We all know how rapid the progress of technology has always been. It hardly takes any time to go from one breakthrough innovation to another. Now that VR is here to stay for good, the future for this technology holds much promise, or perhaps risks that we haven't evaluated properly. It feels like yesterday when cellphones could only be used for calling and texting. Right now, with capabilities like video recording, location tracking, encryption, wifi and powerful signal emitters, it might be said that they are as capable of productivity as of crime. Another glaring example of misuse of technology is the employment of social media and encrypted messaging applications as a recruitment tools by extremist groups.

For these very contradictory scenarios, it is the need of the hour to perceive where the Future of VR is headed. While we are rushing to find
