

Warfare, loss of life, bravery would be very different in full scale VR

that he cannot be harmed still be considered as brave? With everyone altering themselves as their will, would anyone still be considered beautiful? Eventually, with time, skydiving wouldn't be thrilling, travel wouldn't be exciting. Many such essential experiences that are intricately linked to being human would be taken away and we would be left with the virtual programmable copies. Is that something to look forward to, or something to be scared of?

The point we are trying to make here is, Virtual reality is completely unexplored. Anything and virtually everything is possible. That is the biggest reason why, with each unregulated and unplanned step that we take towards it, the risk gets bigger. We need to match our comprehension of the ethics and laws that need to be developed for VR with the speed at which we are developing the technology itself.

Because in the end, perfection would be found within, not in the resolution or latency achieved.
