

# IN-DEPTH: EINK

The human obsession with digitizing everything from mail to social lives did endless good to one of the most ancient human inventions – Paper

**T**here are few inventions which have had as much impact on the human race as paper. If you look around, everything starting from books to newspapers, bills, posters, forms, from a child's drawing book to nuclear warhead plans probably have a copy in paper. And, as with anything that is significantly used by the human race, we are consuming it at an alarming rate. Since paper is made from trees, the excessive usage of paper has taken a toll on the planet's ecosystem and it is no hidden fact that we have been desperately trying to recycle paper but are barely making any impact.

This situation called for technology's intervention. What was needed, was an electronic alternative to paper that could be used, erased and reused, yet have the readability of paper as well as minimum need for power, since we are too used to books without batteries. Along comes electronic paper, or e-Paper.

There are inventions which drastically change our conventional way of doing something, and change it so much that you almost fail to remember
