

CRT – The king of till the late '90s

Light Processing(DLP) projectors not only were far more portable , they also produced visual results that were far superior to the elderly Eidophor.

After that, it didn't take long for Eidophor to become a relic of the past.

## CRT

The last nail in the coffin for CRT(Cathode Ray Tube) TVs was struck and struck hard a few years back when technologies like LCDs broke out from the milieu of niche to become mainstream. People who were old enough during the '80s and the '90s may still recall the clunky television sets that were in vogue then. You know, the ones that would have a faint white line running vertically right in the middle that persists for a few seconds even after the set is turned off.

### Reason(s) why it's on the way out:

There are a few good reasons why CRT fell out of favour. To begin with, there's the obvious case of the big casing that's required for the tube which made the TV sets big. With technologies such as LCDs, the television set has become considerably slimmer and like with phones, slim is associated with sexiness when it comes to televisions. Also, it's harder to
