

- ◆ 1968 : Sword of Damocles created by Ivan Sutherland and team, which was so named because it had to be attached to the roof due to its weight. He also introduced the concept of the Ultimate display
- ◆ 1982: Hollywood latches on to VR with Tron being the first movie to be based on it.
- ◆ 1987 : Jaron Lanier is credited with coining the term ‘Virtual Reality’. He was also the founder of VPL Research that created the Eyephone and the Dataglove. Also in the same year, “Star Trek: The Next Generation” popularised VR through the Holodeck.
- ◆ 1991 : Virtuality Group brings VR to arcade games with their Virtuality Cabinet and VR goggles which allowed users to experience traditional arcade games like Pacman in VR.
- ◆ 1993 : Sega joins the VR train with Sega VR, although it was not carried forward either due to the underwhelming experience or as Sega puts it - hyperrealism.
- ◆ 1995 : Nintendo’s Virtual Boy launches and fails to be a decent solution as well.
- ◆ 1998 : Sony’s Glasstron display unit is launched, which was a simulated TV in a display. Even though the resolution was better than what was available so far, it did not accommodate motion tracking.
- ◆ 1999 : The Matrix movie comes out and once again, a movie generates mass public interest in VR.
- ◆ 2006 : Toshiba demonstrates and soon discontinues its head mounted display concept which weighed a massive 6-pound plus and ditched the stereoglasses in favour of your own personal 15.6-inch screen wrapped around your head.
- ◆ 2011 : Sony Launches HMZ-T1, its first in a new series of 3D visors. Although the device boasted highly advanced 3D graphics, no motion tracking was incorporated.

Oculus Rift not only provides greatly accurate motion detection, but is also ergonomically well designed.
