

HMD	PROS	CONS
Gear VR	Easy to use with glasses Easy navigation Very Sensitive Headtracking Not too expensive Growing VR app store	Limited Phone support No Positional Tracking Visible Screendoor Effect
Oculus Rift	1080p Display Positional tracking Less motion blur	Some visuals are still low quality The demos are limited in area Narrow field of vision
HTC Vive	Larger work area Lighter and fits best Partnered with Valve	Noticeable screen door effect
Google Cardboard	Very inexpensive, Can be built literally by anyone Designs are open source	Motion detection is not always accurate, depends on the phone Not really a VR headset.
Project Morpheus/ PlayStation VR	Intensive Motion Tracking Sony's Platform backing	Exclusivity to Sony Playstation

So now that you have the timeline as well as a handy list of features to look for in an HMD. Time to go for one? Let us help you decide.

Virtual Reality headsets are still a niche product. Although they are rushing to mainstream, it will be some time before they are commonplace. But thanks to initiatives like Google Cardboard, the VR ecosystem has already started to look much richer. And the rate at which it is being developed and progressed, it wouldn't be a surprise if pretty soon HMDs become the new televisions.
