

Smart TVs generally tend to be quite expensive, so you might want to reconsider paying extra just for this feature when you can buy aftermarket boxes (or even certain Blu-ray players) that allow you to convert any regular TV set into a smart TV. These TVs incorporate Wi-Fi and Ethernet connectivity and support inbuilt apps to access streaming video services. At any rate, just don't expect the same level of usability and speed as your PC or smartphone and you won't be disappointed.
