

tries to contact you through the information provided in the section and is unable to reach you, the consumer may no longer feel inclined to support you. Flippancy and fidgetiness are the only rampant and constant qualities of the everyday Facebook user and it is important to ensure that the consumer feels important all of the time.

Facebook also gives you the opportunity to select a category that your page falls into. Use this to your advantage as certain categories offer you more customisability. A page in the category of restaurants, for example, can also display opening and closing hours of their establishment and display menus directly on the website. Some categories also allow a tiny tab where you can categorically list retail products. All of these features contribute to making your page look and feel more whole.

While it's understandable that it's not possible at such an early stage to populate your gallery with images and videos, it's still a good idea to have at least one or two images and videos in the gallery section of your page. These need not be complicated; simple media that explains the content you present on your page is quite adequate, at this point, you just want to ensure that the gallery doesn't remain empty. The default 'No pictures/videos to show' message that Facebook displays in the absence of any media to show reflects poorly on the page. For our product, a simple picture of the shaving razor alone, or a person using the product will not only get rid of this pesky default message but will also serve to highlight the appearance of the product.

Posting from your page

Before making the first post, it is probably a good idea to get an app that can help you manage your social media. These apps do a multitude of things. They help you schedule your posts and also provide further insights on who saw your post and who liked it along with a detailed set of demographic data that is useful in helping you streamline your future posts. There are many such apps and we won't launch into a comparative analysis of which one is better but it is worth mentioning that apps like Hootsuite, Agorapulse and Sprout social are some of the more popular ones. This is purely optional of course. As we shall see, Facebook provides quite a lot of analytical data by default, without needing any third party app.

The content of the posts can be anything you desire but it is a good idea to minimise the amount of text and increase the number of pictures and
