

of course, a reference to the tens of emails most people get every day, advertising one product or another. This same study also revealed that a DM campaign gets a staggering 300% increase in clicks than a one-off email campaign.

- ◆ While there isn't any substantial data for this, to fill your bio with **buzzwords** is another way to attract attention to your twitter account. In a similar way, searching for these same buzzwords and interacting with the other accounts using them is equally effective.
- ◆ A major problem most Twitter users face is the actual **retention** of followers. Reportedly, an entire 90% of the people who engage with Twitter-based marketing campaigns don't follow the account after said interaction. A way to comprehend this gigantic number is to understand the difference between texting and Twitter. 90% of your texts will almost never go unanswered, because texting is predicated on familiarity amongst people. However, Twitter interactions are based on a familiarity with a brand – be it either a human being, or a company. This means that unless there is any active effort to retain interest, in all probability, there won't be any further interactions.
- ◆ If you believe all this is not worth your while, you can easily use the official Twitter **promotion campaign**. The official Twitter website recommends that you post your username everywhere – your website, your email signature, and even your business cards. Additionally, you can pay Twitter a certain amount for your sponsored tweets to appear on a certain number of account feeds. Twitter claims that a sponsored tweet has the opportunity to be seen by as many as 215 different markets. That is an astonishingly high number for a few sentences that are made up of 140 characters or less.
- ◆ Another surprisingly easy way to gain followers is to actually **follow people**. Let's face it; unless you're some pop culture big-shot that has a name that is instantaneously recognized during dinner table conversations, nobody really has an incentive to follow you. Research suggests that there is a direct correlation between the number of followers you have, and the number of accounts you follow.
- ◆ Research also suggests that the average life of a tweet is a grand total of **18 minutes**. Of course, this figure changes depending on the number of followers you have. For example, if your name were to rhyme with Tim Tardashian, your tweets will live longer than the average lifetime of a human being. But for the rest of us, it's genuinely miniscule. So the key to
