

many mediums and forms. Business-to-business marketing is usually a snug fit here. If you sell something that benefits business owners or working professionals and you can, in one short sentence, clearly delineate why, the answer is probably yes. People are on this site to better their careers, find a new job, network, connect with business contacts, and to get a few minutes of mindless get-away-from-work time. Your offer should speak to someone in that head space.

Since LinkedIn provides great targeting options, including the ability to target by job title, employer, role, skills, and interests, and because LinkedIn profiles contain more detailed and up-to-date “professional” information compared to what people list on their personal profiles on Facebook, etc., a marketing campaign on LinkedIn can provide great results for a targeted and effective drive.

As a service, the ability to connect with professionals across the world makes LinkedIn one of the most active job advertisement web-

sites in the world. To cater to the requirements of such a robust platform, the website provides a multitude of options for recruiters to advertise job openings. The platform allows recruiters a lot of flexibility. They can choose when to stop their adverts and there are no long term commitments involved, unlike in the case of actually employing a recruitment agency to fill up openings. This, coupled with the fact that recruiters can selectively target individuals with a specific profile, ensures that companies often place adverts on LinkedIn.

There are two major kinds of advertising that LinkedIn offers: Native advertising and Text ads. Native advertising is the premium platform that is employed by larger companies and organisations with slightly more extensive budgets. These adverts place the company’s media in the feed of professionals across the world across all platforms: PCs, mobiles and tablets. It also offers you the option to zone in on certain professions.

LinkedIn provides good tracking features
